## Positive Gains

"As a school we have worked so hard over the last two years to create a community driven culture that holds STEM at the center. The ability to receive designation and show those who have supported us the growth and reward for hard work has been an experience we treasure. We are working within our STEM program and with our staff to ensure all PBL and stem projects are completed and displayed to create a uniform design process throughout our building. Through this process we ensure all students and staff have consistent and often exposure to these projects"

-Kim Conrad

## STEM Mission Launched

"Our students have grown in the problems that require multi step instructions and critical problem solving skills. This is vital to multi step word problems found on most math assessments. Our school strives to show up, grow as individuals, and explore the learning around us daily. STEM is exploration and creativity and for us that is exploring and growing your learning daily for yourself and those around you."

-Kim Conrad

## Partnerships that Stick

"This is done in classroom projects, school wide projects, and public speaking within our career days. We strive to include them in more items and grow our students' knowledge."

-Kim Conrad

## PBL Spotlight

"We love our partnership with Sevier Solid Waste. Our students worked with Laura Howard and Tom Leonard to design and build trash cans to solve a problem posed to moisture in the trash generated in our community. As a tourist driven town we generate more trash than most towns our size and we must find ways to make the use and disposal of trash something that lessens our economic footprint. The students held multiple meetings with Mr. Leonard, and helped him create solutions to his existing issue."

-Kim Conrad

## Looking Ahead

"We are looking forward to growing and exploring new careers and PBL based learning in an attempt to create students who are engaged and critical thinkers."

-Kim Conrad
