STEM Culture

Jack Anderson is committed to engage, enrich, and empower students every day. Through STEM learning, students collaborate by using the EDP model to be career ready for whatever their future holds. We also have strong community partners that pour into our students and staff, making each day a success. Our students continue to grow and meet achievement goals. Students have more access to authentic learning experiences, which in turn prepares our students for future careers.

- Amy Bradley

Shaping our Culture

STEM Designation inspires our school and staff to continue innovating to bring new experiences and opportunities for our students.

PBL Mindset

Jack Anderson has STEM norms that clearly establish the expectations surrounding PBLs and STEM learning annually. Our teachers are constantly looking for new ways to engage students in authentic STEM learning opportunities. They plan PBLs to intentionally incorporate multiple content areas and partner with community members when possible. Our students continue to grow and meet achievement goals. Students have more access to authentic learning experiences, which prepare them for their future careers.

PBL Spotlight

Our Related Arts team designed and implemented a PBL across all grade levels. Teacher explained the EDP model to students, and then students applied this model as self-reflection tool to make future goals. Students then used a variety of tools to create a representation of themselves to be displayed for an upcoming community family night celebrating 25 years of growth at Jack Anderson.

Partnerships are Key

We partner with a variety of community members, including short term partnerships for specific projects and long term partnerships that span months-long projects with students.
